

MAGIC GLIDES

Congratulations on your purchase of the cleaning industries best value in wand glides! Installing Magic Glides, you will experience the greatest water removal and reduction in carpet cleaning than ever before. Your Magic Glides work differently than the full size glides do by attaching directly to the wand lip of the wand, rather than around them. If your wand has lips set ¼” or further apart, than you can add another Magic Glide to your wand – one for each lip. Some wands have only 3/16” or less, so there is not enough room to use 2-Magic Glides. So in this case just add one Glide to the front lip or back or both of lips of the wand.

Installation Instructions:

When you receive your Magic Glides, install each over the Top and Bottom Lip as shown. If you purchased one, then install your Glide on the Bottom Lip- (furthest away from the jets).

IMPORTANT NOTE: We recommend cleaning with only 1 **Magic Glide Lip** There are circumstances however, when you may desire to install the Lip on the front of your wand. Additionally, 2 **Magic Glide Lips** may be beneficial at times, in particular, if your wand can accommodate 2 Lips, you may find flood extraction with 2 Lips to be more effective than 1 Lip.

1. Remove one **Magic Glide** from the retainer.
2. Clean & Dry the mouth of your wand
3. Beginning at one end of the wand-opening slide the **Magic Glide** onto the wand, with your other hand.
4. Not all wands are manufactured identically; **some trimming will be necessary to allow proper fit.** If trimming is necessary, an Exacto blade is recommended. Cut at an angle - Hint: For best performance, trim the **Magic Glide** so that the Lip is not touching the ends of the mouth opening (about a 1/16” to 1/8” gap at each end of the wand).
6. If installing 2 glides, install the 2nd glide following the same procedure. Follow the same procedure for each end of the **Magic Glide**.
7. Installation has been performed properly when the lip is flush with the surface of the wand.
8. For better fit may try rotating the Magic Glide the other direction.
9. To ensure proper gap and airflow, you may need to slide a dull butter knife from one end of the inlet to the other. Additionally, the dull butter knife becomes a handy cleaning tool for debris, which may become lodged.
10. Adhesive is not necessary, however, it aids the Lip in forming to your wand. Any **Silicone Sealant** will usually suffice; just apply the sealant to the inside of your Magic glide at each end and allow drying time. Additionally, silicone caulk can be applied to the entire length of the glide and then installed, simply wipe the excess caulk immediately. Begin cleaning carpeting effortlessly and effectively.

Important: At times your magic glide may fit better one direction over the other. If the glides are too restrictive, remove and re-install it by rotating it end over end 180 degrees.

Important Enhanced Performance Instruction for your Lips Read and Carefully follow the Instructions

As you continue to use your **Magic Glide**, the slot gap of the Lips may gradually expand causing the Lips to become loose on the wand. Since Teflon does not have memory, they do not normally return to their original shape on their own. To improve their performance, just remove the Lip and squeeze it with your fingers beginning on one end and continue squeezing the Lip throughout the entire length of the Lip to close the gap. This will give your **Magic Glide** a new “memory”. Re-install your Lip and continue working. Some wands have such a large gap between the Lips of their opening that you may not notice this at all as the gap will not be an issue.

Repeatedly removing and re-installing your lips will cause the dwell (gap) of the Lips to enlarge. If you do remove your **Magic Glide**, simply follow the instructions to close the gap and re-install.
